

UNBOXING #1

Anjana Data Platform for
Data Spaces

(ADP4DS)

AGENDA

- 01. Bienvenida
- 02. Novedades BAIDATA
- 03. Productos/Servicios: Anjana Data
- 04. Q&A
- 05. Cierre

BAIDATA es la **Asociación** para el desarrollo
de la **economía del dato** en **España y Portugal**

Es una iniciativa de:

INTERNATIONAL DATA
SPACES ASSOCIATION
HUB SPAIN

Promovida por:

innovalia
ASSOCIATION

Con el apoyo de:

Bizkaia
foro aldundia
diputación foral

GAIA
CLUSTER ICTA

1. CONOCIMIENTO

- Biblioteca BAIDATA
- Grupos de Trabajo Internacionales

4. ECOSISTEMA

- Foro BAIDATA
- Comunidad BAIDATA
- Red de Centros Demostradores

2. INNOVACIÓN

- Aceleración de proyectos estratégicos
- Catálogo BAIDATA de Proveedores y Servicios

3. TALENTO

- Formación Práctica
- Acreditación Profesional Internacional en Espacios de Datos

Connect to the data economy

BAIDATA es la asociación para el desarrollo de la soberanía y la economía del dato en la Península Ibérica

TALENTO

Aumenta el valor de tus datos

CONOCIMIENTO

Incrementa tus beneficios

ECOSISTEMA

Forma parte de un ecosistema digital líder

INNOVACIÓN

Descubre nuevas oportunidades de negocio

THE ULTIMATE PLATFORM FOR FULLY ADAPTIVE DATA & ANALYTICS GOVERNANCE

Unboxing Baidata - Anjana Data Platform For Data Spaces (ADP4DS)

12 de noviembre de 2025

A Data Space is defined as a distributed system defined by a governance framework that enables secure and trustworthy data transactions between participants while supporting trust and data sovereignty

Although there are different initiatives, guidelines, frameworks and standards promoted by the EU Comission for building Data Spaces, there are still many limitations and challenges for most organizations

Technical approaches with a focus on **infrastructure** and **architecture** rather than **data management**

A **growing** and constantly **evolving** ecosystem, with a high degree of **fragmentation**

Existing **barriers** to achieving organizational, technical, and semantic **interoperability**

Difficulties in ensuring **sovereignty**, **traceability** and **regulatory compliance** in practice

Technical solutions and tools

Complex tools for **technical** profiles with **low maturity** levels and few success cases

High implementation **costs** and **economic barriers** for many organizations

Non-adaptive solutions with low **customization** capabilities to meet **sector-specific** needs

Need for **automation** of key processes in productive business environments

ADP4DS is Anjana Data's value proposition to facilitate the construction, management, operation, and maintenance of Data Spaces meeting European guidelines, frameworks, standards and regulations

INTERNATIONAL DATA SPACES ASSOCIATION

Normalización
Española

Anjana Data Platform For Data Spaces (ADP4DS)

Robust and mature platform, internationally recognized in business environments

Implementation plan with low initial investment and flexible, scalable pricing model

Modular, adaptive, and customizable solution with an open, scalable, and extensible architecture.

Out-of-the-box integrations with Trust Framework, Clearing House, and IDS connectors

We have built a first-class ecosystem which supports our vision and helps us in our mission of helping organizations in their Data-Driven journey by using innovative and disruptive technologies

Working together with leading Cloud & Data Platforms Vendors

Partnering with top consultancy firms and integrators

Sharing vision with experts and independent advisors

Collaborating with Top Tier Universities and Associations

Creating a growing community of certified professionals

OUR ECOSYSTEM

CLOUDS & TECHNOLOGY PROVIDERS

EDUCATIONAL INSTITUTIONS & ASSOCIATIONS

CONSULTANCY & INTEGRATION PARTNERS

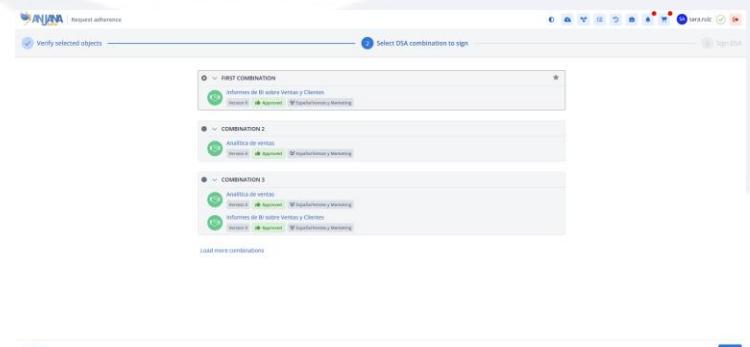

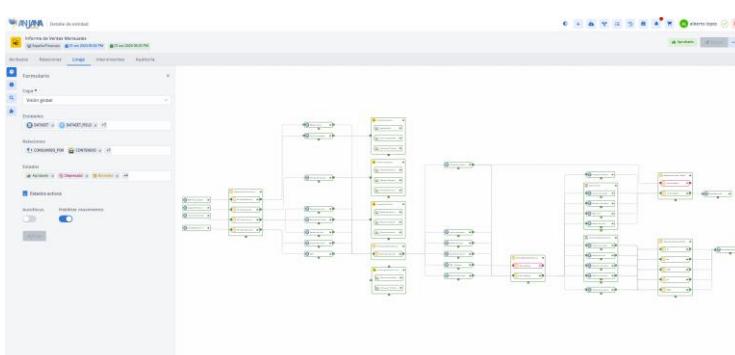

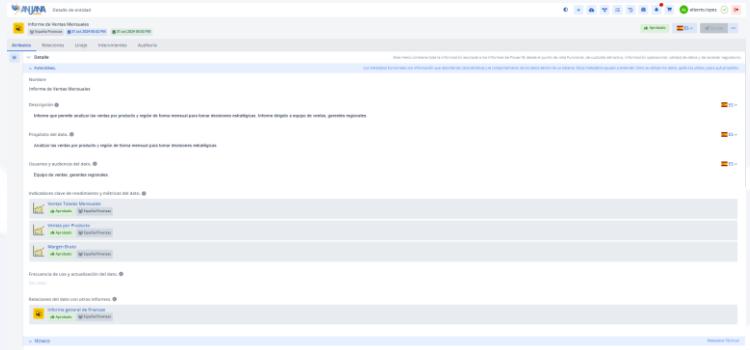

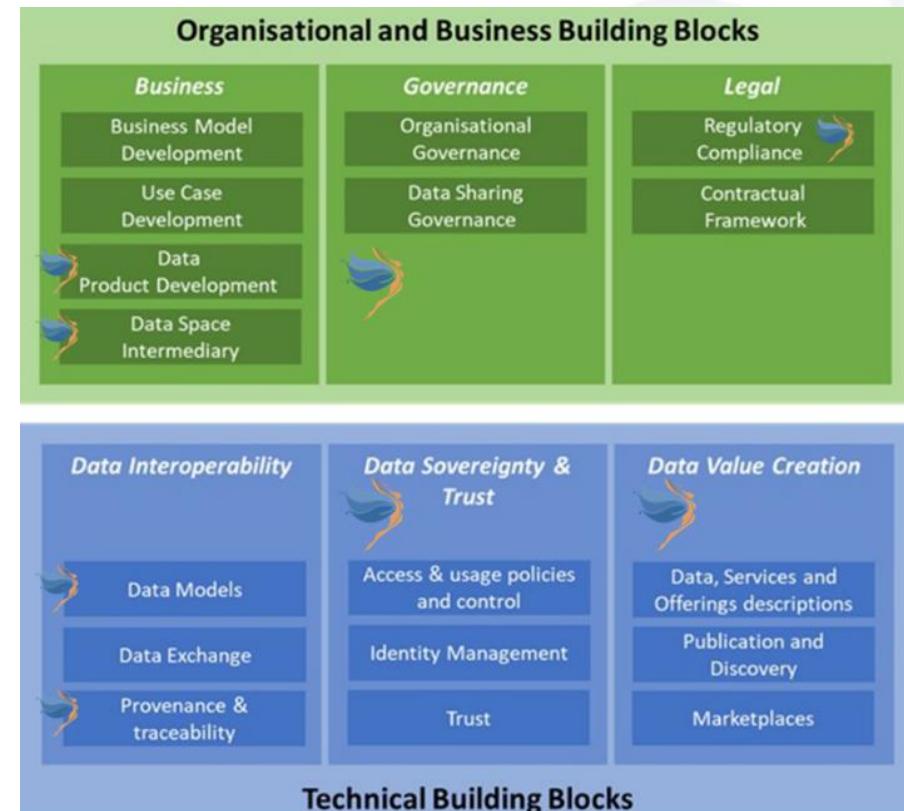

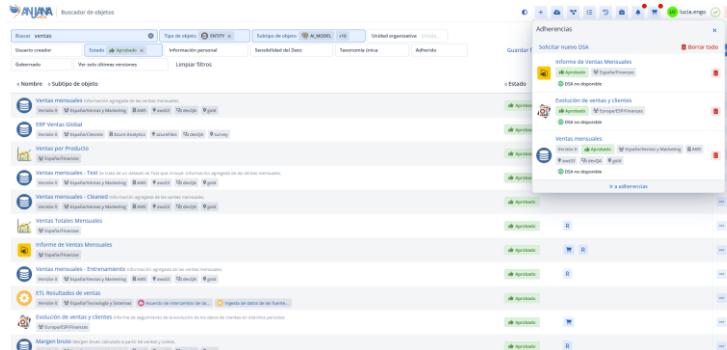

EXPERTS & INDEPENDENT ANALYSTS

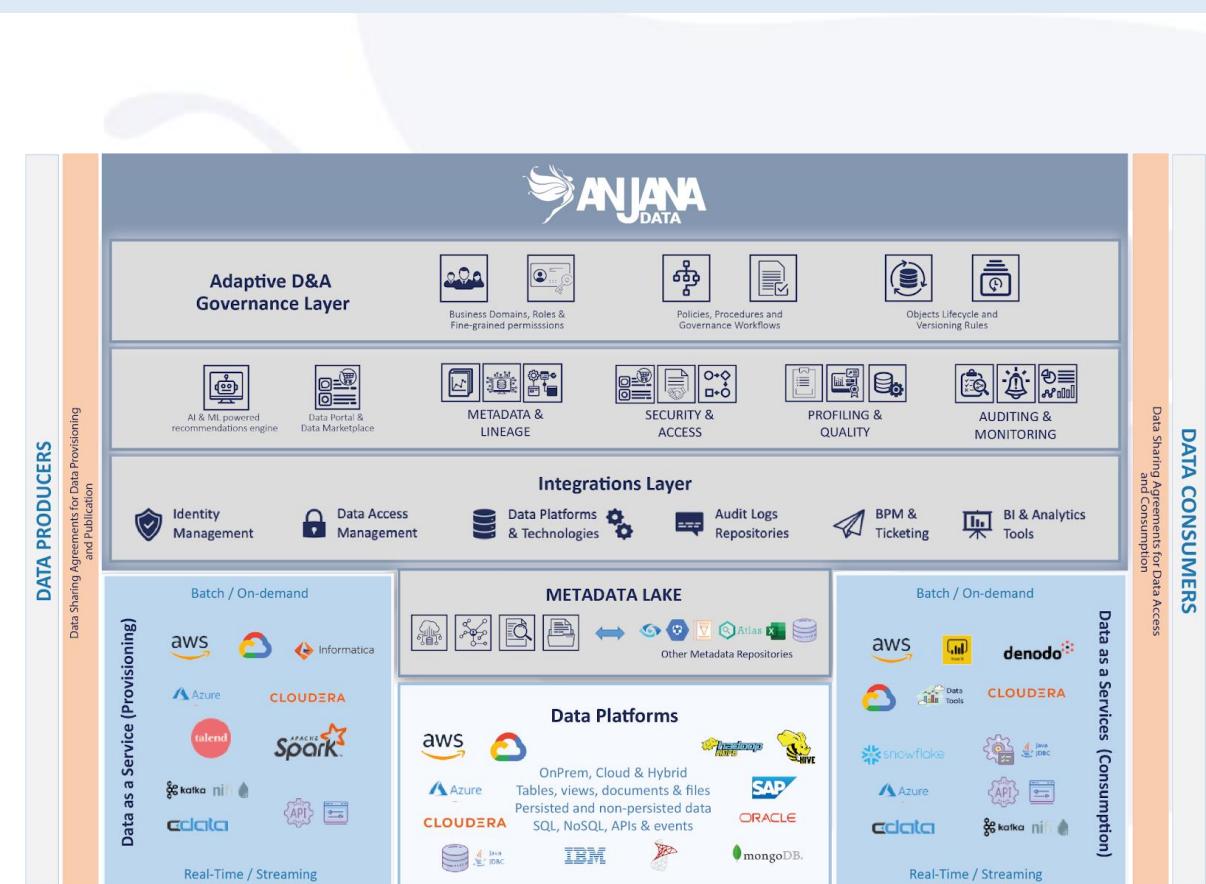

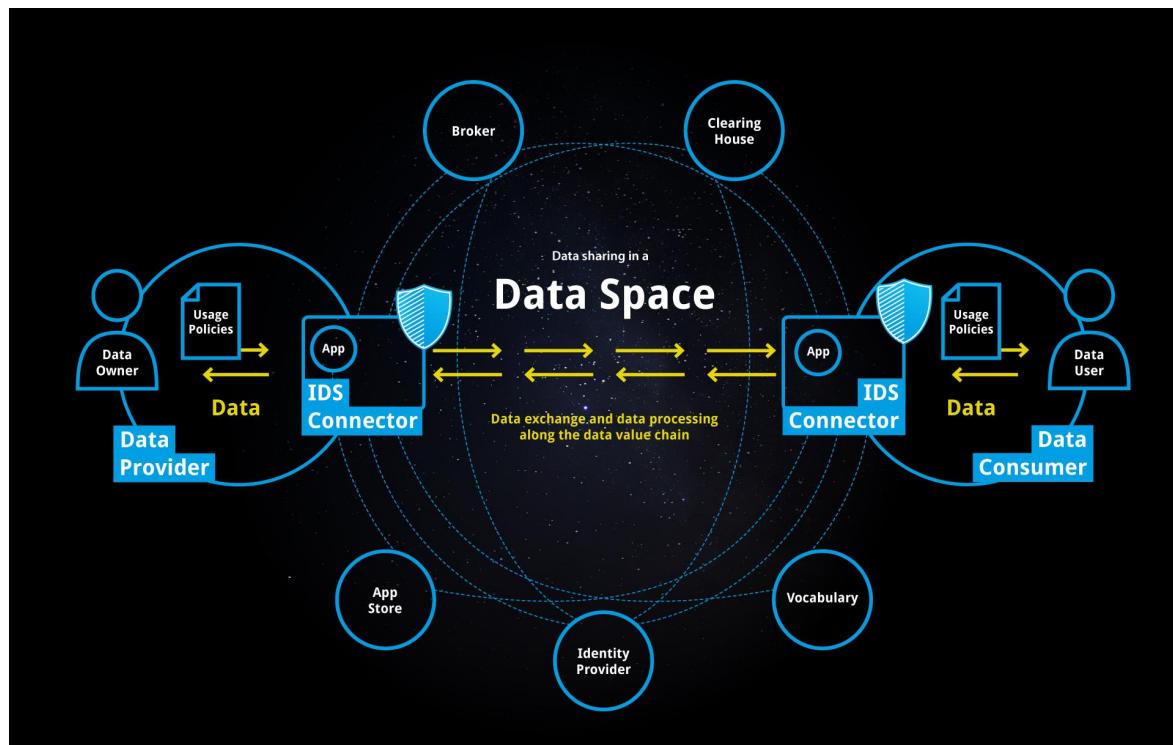

+600 CERTIFIED ANJANA DATA PROFESSIONALS & EXPERTS

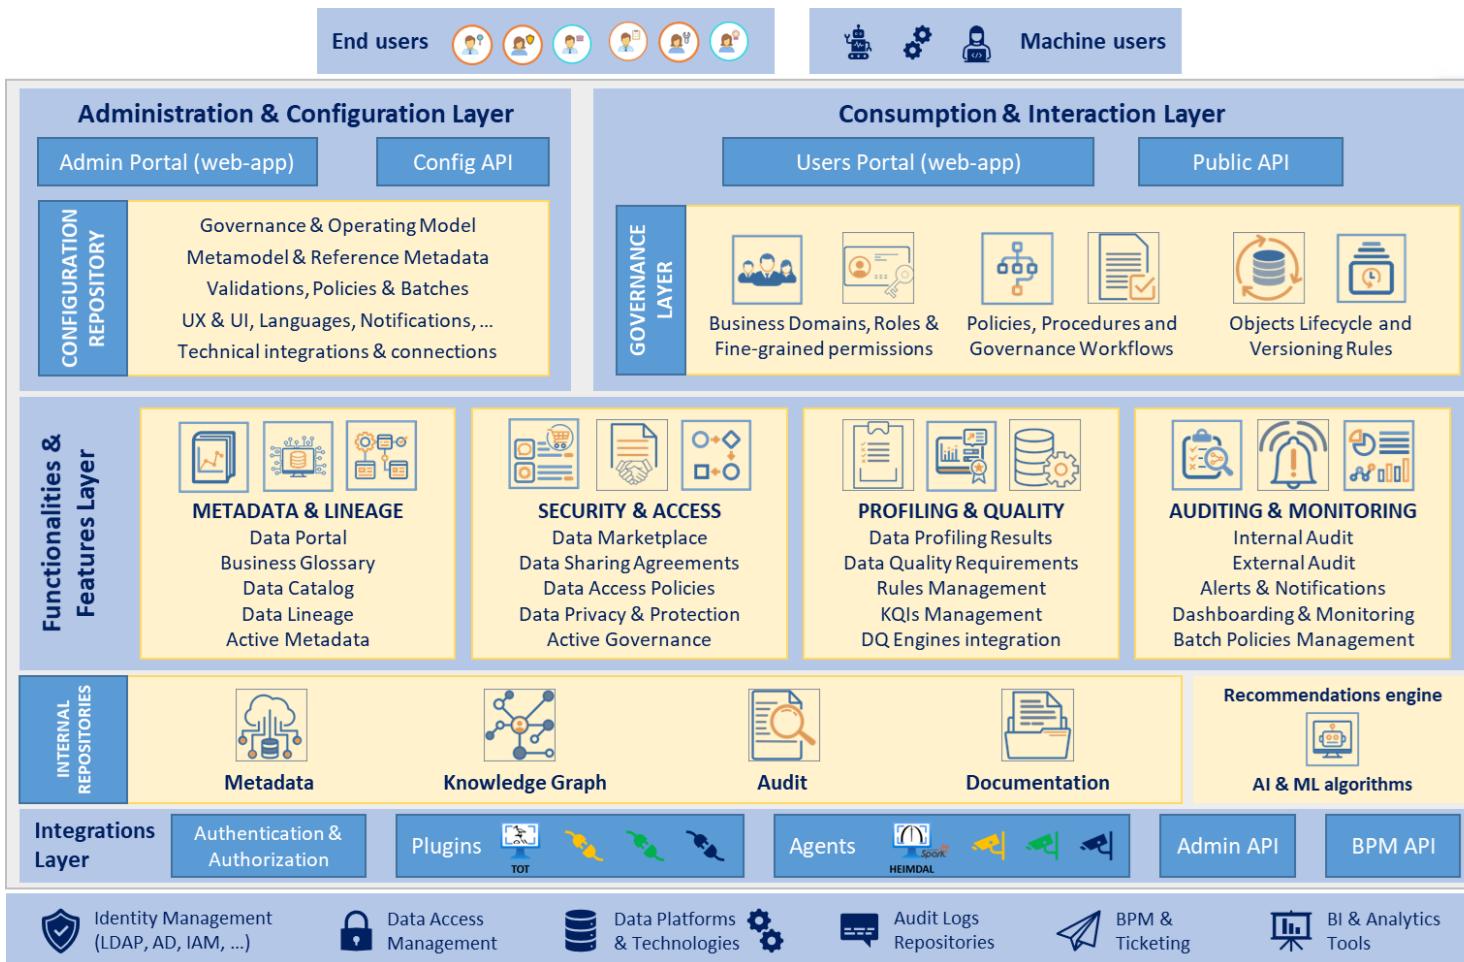

With ADP4DS, any organization may implement most of the building blocks defined by DSSC for the construction of a data space, all within the same platform and with a friendly UX&UI on top

ADP4DS works as a technology-agnostic common layer for Data Governance & Sharing thanks to its metadata-centric approach while it offers extended bidirectional native integrations with IDS connectors

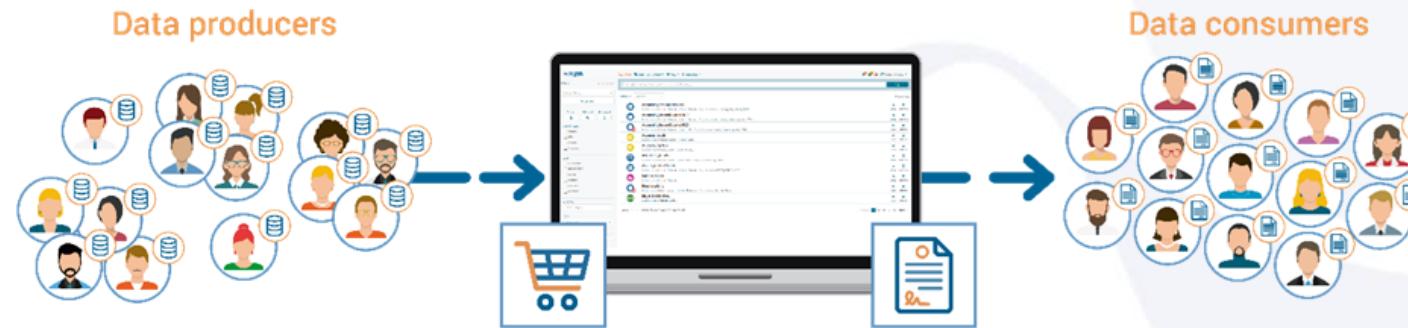

ADP4DS architecture has been designed to cover all Data Governance and Sharing needs within a Data Space while being agnostic to the technical architecture and the data ecosystem technologies

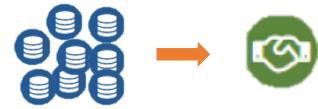

- Administration & Configuration Layer lets admin users customize the solution based on the Data Space's needs and requirements without coding
- Consumption & Interaction Layer allows any kind of user to get access to all Functionalities & Features passing through the Governance Layer
- Both web-based Portals and APIs available for interaction with the solution
- 4 main functional modules offering different features and functionalities all integrated within the same solution and platform
- Functionalities and features may be customized for the Data Space, and they will be adapted to the users based on the defined governance model
- All features are accessible through the web-based Portals and APIs
- Several internal repositories for diverse purposes, all accessible through APIs and direct access for further exploitation (no black boxes)
- Recommendations engine to give users support and advice
- Different options to integrate the solution within any kind of technology stack and ecosystem with extension and customization capabilities
- Plugins to automate common technical processes over data platforms

A Data Sharing Agreement is a flexible, adaptable and fully customizable logical group of Data Products designed to implement effective and efficient data sharing ensuring secure and trustworthy transactions
